

Microgrid industry development scale

Overview

What is the global microgrid market size?

The global microgrid market size was valued at USD 9.88 billion in 2023 and is projected to grow from USD 11.24 billion in 2024 to USD 37.35 billion by 2032, exhibiting a CAGR of 16.19% during the forecast period. Asia-Pacific dominated the microgrid market with a market share of 43.02 % in 2023.

What are the key factors affecting the microgrid market?

The microgrid market is expected to have a robust growth during the forecast period, primarily due to two main factors, i.e., the global demand for clean energy generation and a self-sufficient source of power generation in times of crisis or grid disconnection.

What is the hardware segment of microgrid market?

Hardware segment to account for the largest market share during the forecasting period. The hardware components of microgrids encompass power generators, energy storage systems, and controllers. The hardware segment of the microgrid market is witnessing growth propelled by several factors.

Which region will dominate the microgrid market during the forecast period?

The Asia-Pacific region is expected to dominate the market during the forecast period due to a high rate of electrification, mainly for rural or semi-urban areas. This section covers the major market trends shaping the Microgrid Market according to our research experts:.

What are the development trends of a zero-carbon microgrid?

Then, three development trends of the zero-carbon microgrid are discussed, including an extremely high ratio of clean energy, large-scale energy storage, and an extremely high ratio of power electronic devices. Next, the challenges in achieving the zero-carbon microgrids in terms of feasibility, flexibility, and stability are discussed in detail.

Which microgrid market has the highest compound annual growth rate (CAGR)?

The commercial and industrial buildings microgrid market is anticipated to demonstrate the highest Compound Annual Growth Rate (CAGR) throughout the forecast period. This surge can be attributed to the imperative for a dependable power supply to ensure uninterrupted operations across various industries.
