Current Night Sky

By dawn it has climbed quite high into the south-southeastern sky, appearing together with Jupiter. Now, Jupiter is rising in the first half of the night. In early October you'll find it high in the south as dawn approaches, and later in the month it's progressed farther over to the west before sunrise.

Sky Map in Real Time

1 ??· Every evening, the stars in the sky return to the same place 4 minutes early because the Earth's movement in its orbit around the sun gives us a slightly different background of stars each night. These 4 minutes represent the difference between the length of a day (24 hours) and that of an earth's rotation (23 hours and 56 minutes).

How To Tell If A Drone Is Watching You At Night

By using a thermal imaging camera, you can detect the heat signature emitted by a drone, distinguishing it from other objects in the night sky. This method can enhance your ability to confirm if a drone is watching you at night.
