

Nutanix ibm power systems

Overview

What is Nutanix software?

Nutanix is a global leader in cloud software and a pioneer in hyperconverged infrastructure solutions, making computing invisible anywhere. Organizations around the world use Nutanix software to leverage a single platform to manage any app at any location at any scale for their private, hybrid and multi-cloud environments.

What is the Nutanix platform?

The Nutanix platform is a system that incorporates a wide range of storage optimization technologies that work together to make efficient use of available capacity for any workload. These technologies are intelligent and adaptive to workload characteristics, eliminating the need for manual configuration and fine-tuning.

What is a Nutanix BIOS?

Nutanix platforms use a baseboard management controller (BMC) and basic input/output system (BIOS) to control the motherboard. The Nutanix BIOS contains optimized power management settings by default. Please do not change Power Management Configuration settings in the BIOS.

What makes Nutanix a great it service provider?

Simplicity: A hallmark of Nutanix solutions, and a key driver behind the company's average NPS score of 90 for the last seven years, is simplicity. Service providers will be able to deliver IT services, at any scale, with simple one-click deployment, upgrades, scaling, self-healing capabilities, troubleshooting and more with Nutanix.

What is the Nutanix controller VM?

The Nutanix controller VM is where the vast majority of the Nutanix software and logic sits. This software-defined solution, which ships as a bundled

software + hardware appliance, was designed from the beginning to be an extensible and pluggable architecture. (As mentioned above, likely numerous times, the Nutanix platform is a software-based solution.).

What configurations are available for IBM HyperConverged systems powered by Nutanix?

The IBM Hyperconverged Systems powered by Nutanix offerings are provided in fixed configurations with common components and multiple configurations based on memory and disk drive size. The following table shows the 1U configurations. Table 2. IBM CS821 (8005-12N) configuration The following table shows the 2U configurations. Table 3.

Nutanix ibm power systems

IBM Hyperconverged Systems powered by Nutanix overview

The IBM Hyperconverged Systems powered by Nutanix offerings are available in 1 EIA rack unit (1U) and 2 EIA rack unit (2U) configurations that address your cloud capabilities and mission-critical workloads. Table 2. IBM CS821 (8005-12N) configuration Feature

Linux distributions and virtualization options for POWER8 and ...

If you are using graphics processing unit (GPU) on IBM Power® System AC922, you must not upgrade from Ubuntu 18.04 to Ubuntu 20.04. CUDA is not supported for Ubuntu 20.04 on IBM Power Systems. For more information on KVM guests, see Certified guest operating systems for Red Hat Enterprise Linux with KVM .
