

Optimal settings for photovoltaic inverter adjustment

Overview

What should I do if my solar inverter is over 258V?

We recommend speaking to your solar installer or an electrician to check that your inverter settings comply with the mandatory settings, not the factory settings. If you have concerns due to your inverter recording voltage above 258V or your safety is at risk, contact us and one of our crews will investigate the issue as soon as possible.

How do I set the inverter settings to default?

The inverter settings can be set to default in the following way: Navigate to the inverter settings by clicking on the cog symbol in the right top corner. Click on the 3 dot symbol in the right top corner. Select "Reset to defaults" from the menu and the settings will reset to default.

How can I reduce the power consumption of my inverter?

If you want less than 1000w taken from the grid, you need to change your time of use settings / add more panels / add more batteries / reduce the load. It depends Inverter is consuming +/- 50w, taken from the grid as long as grid is present.

Do all solar systems have the right settings?

Not all solar systems have the right settings when first installed. We recommend speaking to your solar installer or an electrician to check that your inverter settings comply with the mandatory settings, not the factory settings.

How do I configure a victron inverter?

The inverter is ready for use with the standard factory settings (see the Technical specifications chapter). The inverter can be configured using the VictronConnect app. Connect using a smartphone or tablet via Bluetooth or using a computer via USB and a VE.Direct to USB interface). Settings may only

be changed by a qualified engineer.

What is self use mode solar inverter?

Self-Use mode - Designed to maximize a system's energy usage, drawing all power out until 10% remains in the active battery systems (the money maker mode). How Can You Improve Your Solar Inverter efficiency?
