

Parallel control of lithium battery for energy storage

Overview

What happens if a lithium-ion battery is connected parallel?

Uneven electrical current distribution in a parallel-connected lithium-ion battery pack can result in different degradation rates and overcurrent issues in the cells. Understanding the electrical current dynamics can enhance configuration design and battery management of parallel connections.

What are series and parallel connections of batteries?

Series and parallel connections are the fundamental configurations of battery systems that enable large-scale battery energy storage systems (BESSs) with any type of topology. Series connections increase the system voltage, while parallel connections increase the capacity.

Are parallel-connected lithium ion cells suitable for photovoltaic home storage systems?

This study discusses the influence of circuit design on load distribution and performance of parallel-connected Lithium ion cells for photovoltaic home storage systems. It also presents a novel fast capacity estimation method based on current curves of parallel-connected cells for retired lithium-ion batteries in second-use applications.

How many batteries are connected in parallel?

Each module of the Tesla Model S 85 kWh battery pack comprises six groups of 74 cells connected in parallel. The number of parallel connections is increasing to improve energy use in a variety of systems, such as the world's largest BESS, the Red Sea Project, which features 1,300 MWh of battery energy.

Why do lithium ion batteries need to be connected in series?

To meet the power and energy requirements of the specific applications, lithium-ion battery cells often need to be connected in series to boost voltage

and in parallel to add capacity . However, as cell performance varies from one to another [2, 3], imbalances occur in both series and parallel connections.

Is state of charge a condition for parallel connection of batteries?

Two previous studies [10, 11] used the state of charge (SOC) as a condition for the parallel connection of batteries. Since the state of charge of the battery is an estimated value, there may be an error compared to the actual state of charge.
