## Overview

---

The first step in evaluating which solar rack to use, you must first evaluate the space available for the home solar panels. Either on the roof, on the ground or on a pole, you need to know the square footage before you begin the selection process. Measure the length and width of the surface on which you intend to.

Next we will need to evaluate the length and width of the solar module you will be using. Each home solar panel has its own specific measurement so consult the panel's specification sheet.

The next step then is to calculate the total number of solar modules we want to mount at our site. Remember that there are different solar mounts used for each application: flush.

Once you've determined how many panels your site can handle, and the rails necessary to hold the panels, the last step is choosing the clamps that secure the modules to the frame.

At this point of the installation, you are now ready to pick the rails. You have already figured out where the roof supports are and that your roof can hold the added weight of the.
