

# Photovoltaic bracket modeling using 3D3S

## Overview

---

What is a fixed adjustable photovoltaic support structure?

In order to respond to the national goal of “carbon neutralization” and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed adjustable photovoltaic support structure design is designed.

What is a 3D CFD model?

A 3D CFD model is developed to simulate the airflow around photovoltaic panel arrays. The arrangement and structural parameters of the PV panel arrays are key factors. Optimal designs for PV panel arrays under different wind velocities are determined.

Why is 3D lithography important for PV fabrication?

This is advantageous as 3D structures can be formed from material growth and etching rather than explicit geometry definition. This allows a means of forming complex 3D structures through lithography steps followed by impurity diffusion as a function of time and temperature—key processing steps that are common to PV fabrication .

What are the 3 elements of PV modelling?

The modelling of PV can be separated into three elements: processing, optical and electrical characteristics. A multitude of packages exist to model these, including Sentaurus, Lumerical, Silvaco, Comsol, Crosslight and Cogenda to name a few , , , , , .

What inclination angle should a PV panel array have?

We can then conclude that the optimal design for PV panel arrays should be an inclination angle of 35°, a column spacing of 0 m, and a row spacing of 3 m under low-and medium-velocity conditions, while panel inclination needs to be properly reduced under high-velocity conditions.

What are the three key elements of a PV simulation?

The three key elements to the simulation are the injected wave source, the boundary conditions and the monitors used. The latter determines the output data. For PV simulations a key monitor is an analysis group 'solar generation'. This outputs a spatial carrier generation profile of the structure in a MAT file.

## Photovoltaic bracket modeling using 3D3S
