

Photovoltaic certification training

Overview

What is a photovoltaic system technology course?

Gain insight into a topic and learn the fundamentals. This course offers you advanced knowledge within the field of photovoltaic system technology. We'll learn about the solar resource and how photovoltaic energy conversion is used to produce electric power.

How long is a photovoltaics course?

The course is made up of 9 sections with an estimated workload of 2-3 hours each. The academic level is targeted at master students at technical universities and engineers from the energy industry. Passing this course offers you a great basis for a career in the field of photovoltaics.

Why should you take a photovoltaics course?

Passing this course offers you a great basis for a career in the field of photovoltaics. These lectures serve as an introduction to the field of photovoltaics in general, which includes the most basic terminology, an overview of the history of PV as well as the industrial deployment of the technology.

What is a PV design specialist (PVDs) board certification?

Our PV Design Specialist (PVDS) Board Certification recognizes the advanced experience and skill of PV system designers. This Board Certification demonstrates your proven ability to configure the mechanical and electrical design components of PV systems. To find out if you meet the eligibility requirements for this Board Certification, click.

What is a PV system Inspector (pvsi) board certification?

The PV System Inspector (PVSI) Board Certification recognizes the advanced experience and skill of inspecting residential and commercial photovoltaic systems. This Board Certification is for those who are highly knowledgeable of

PV systems, applicable codes and ordinances, and assessing the safety and operation of PV systems.

What is a PV installer specialist (PVIs) board certification?

The PV Installer Specialist (PVIS) Board Certification was designed for those who are highly competent with all aspects of PV installation processes, from installing DC and AC PV system conductors, raceways, system monitoring, control, and communication hardware to developing safety plans.
