

Photovoltaic combiner box function test instrument

Overview

What is a combiner box in a photovoltaic system?

In a photovoltaic system, a combiner box acts as a central hub that consolidates and manages the direct current (DC) output of multiple solar panels. Its main purpose is to simplify the wiring structure, enhance system security and simplify maintenance procedures.

How are PV DC combiner boxes tested?

PV DC combiner boxes are tested according to IEC-61439-2 and are constructed on the basis of the test results as well as assembled for the specific application. This ensures that each of the requirements of the target application is fully met.

How does pvchecks-pro work?

By a single GO-key stroke PVCHECKS-PRO performs all commissioning tests. Thanks to the seamless mode, PVCHECKS-PRO is able to test in sequence all strings of a combiner box by a single GO-key stroke. Finally, the GFL - Ground Fault Locator detects the precise position of the lack of insulation, speeding the troubleshooting.

What does a PV tester measure?

The tester measures ground (earth) continuity, open circuit voltage, short circuit current, maximum power point voltage, current and power (with AC/DC clamp). The instrument will also give you the fill factor of the PV module or system under test.

Why should you use a PV tester?

Maximise the time you spend in the field by recording up to 999 full sets of string data - to complete testing without downloading and clearing the memory. The highest rated PV tester on the market, the ability to test across multiple strings reduces the risk of accidental damage to the instrument and

the user.

What is a DC combiner box?

Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I,V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.
