### How to use KACO inverter?

When using devices from other manufacturers or in combination with KACO inverters, bus coupler circuit-breakers as a minimum must be used for shutting down devices from other manufacturers. Connect the grid voltage using the external circuit breakers. 2. Connect the PV generator using DC isolator switch (0 → 1). » The inverter begins to operate.

### How do I shutdown a KACO inverter?

Accessories Inverter off When using suitable KACO inverters, the shutdown can be carried out via the grid separation relay integrated into the inverters and the “Inverter OFF” digital output instead of via interface switch. Information about the “Inverter off” function: See manual under .

### Can KACO inverter be repaired?

There are components in the housing of the inverter which may only be repaired by our KACO customer service team. The inverter should be checked for proper operation by a qualified electrician at regular intervals. The inverter contains components that you cannot replace! Lethal voltages in the inverter.

### What happens if a grid operator fails a KACO inverter?

The grid operator limits the feed-in - -power of the inverter. Measured AFI fault current was > 180 Notify authorised mA. Fault results in immediate shut-electrician / KACO down of the device.

### How do I Reset my KACO inverter?

Contact KACO Service to test the hardware. The inverter continues to operate as normal without losses to the yield, even when an erroneous daily peak value is dis-played. The value is reset overnight. To reset the value immediately, switch the inverter of by disconnecting it from the grid and switching of the DC, then switch it back on.

How does a PV inverter work?

The inverter converts the DC voltage generated by the PV modules into AC voltage and feeds it into the grid. The starting procedure begins when there is sufficient sunlight and a specific minimum voltage is present in the inverter.
