Overview

What is a solar iboost?

The Solar iBoost, also known as the iBoost Solar or Solariboost, is a device that optimises the use of excess solar energy generated by solar panels.

How do bifacial solar panels improve photovoltaic efficiency?

Innovations in design, such as bifacial solar panels that capture sunlight from both sides, can significantly boost photovoltaic efficiency. These advanced designs allow panels to absorb more light and generate more power. The materials used in solar panels also influence their efficiency.

How do I install a solar iboost+?

A Solar iBoost+ is simple to install next to your hot water tank as it is wired to your existing immersion heater (up to 3kW). The Solar iBoost+ Controller and Sender communicate wirelessly so there is no need for cables between them. If you have 2 immersion heaters the Solar iBoost+ will connect to both and switch between them automatically.

What is the solar iboost+ by Marlec?

The Solar iBoost+ by Marlec is a device that enables you to use more of the free energy produced by your solar PV system, reducing your energy bills even further by heating water for free. How Does the Solar iBoost+ Work?

Most domestic solar PV systems will generate more energy during the day than is used.

What is a solar panel optimiser?

A solar panel optimiser is a device that helps maximise the efficiency of your solar panels by individually optimising the output of each panel. Imagine your solar panel system as a sports team. Usually, if one player (well, panel) has an off day where it's shaded or a bit crusty, the entire solar team's output and

performance will dip.

How to increase solar panel efficiency?

Increasing solar panel efficiency not only enhances energy generation but also contributes to a sustainable future. Incorporating advanced technologies, optimal positioning, and regular maintenance can significantly boost your panel's efficiency.
