

# Photovoltaic panel concrete pouring solution

Voltage range:691.2-947.2V

>6000 cycles(100%DOD)

Rated battery capacity:  
216KWH (customizable)

EMS communication:  
4G/CAN/RS485

## Overview

---

Solar farms offer a safe and renewable way of generating energy. However, while farmers have always been concerned for their assets sat in fields, there's a notable problem with solar panel farms – the solar panels are the most valuable asset and there are lots of them! As such, landowners need to secure the solar.

All ground mounted solar panels need support, height from the ground (to allow air flow, cleanliness and maintenance as well as enabling dual land purpose) and security. A solar panel in a solar panel farm is only as good as its.

One of the drivers towards relying more on solar panel energy is to reduce our carbon footprint by relying less on fossil fuels. It makes sense therefore to consider the materials used to produce.

Can a reinforced concrete block support a solar panel above ground?

In areas where penetration of the ground is difficult or restricted for archaeological or safety reasons, our reinforced concrete blocks are the perfect solution, providing ballast to support these solar panels above ground. Our solar panel ballast blocks are designed to provide support to multiple panels.

What types of solar ballast footings does Conigliaro block manufacture?

Conigliaro Block manufactures all types of precast concrete solar ballast footings used to securely mount and position solar panels. Our solar ballast blocks are poured to your specifications to prevent movement and overturning of solar panel systems. Our footings are available in a wide range of sizes, weights and mixes.

Should I use precast concrete ballast blocks for my solar panel project?

Choosing to use our precast concrete ballast blocks for your solar panel project can provide you with added flexibility. Ballast blocks can be used on flat commercial-style roofs, where it is not possible to penetrate the roof surface, and are simpler to install than penetrating systems.

What is a photovoltaic concrete structure?

Researchers of the Block Research Group at ETH Zurich have developed an ultra-thin, self-supporting, photovoltaic concrete structure with multiple layers of functionality. Beyond just power generation, this incredibly sinuous structure offers thermal regulation, insulation and waterproofing properties.

Can a concrete base support solar panels?

An example of free-standing concrete bases being used to support solar panels can be seen at Wellingborough solar farm. Due to an archaeological restriction on part of the land, our bespoke division manufactured 275 reinforced concrete blocks, this allowed a group of panels to be erected without the need for excavation.

Can a concrete façade double the power harvesting capacity of traditional roof-based solar?

With two different yet complementary sets of knowledge, LafargeHolcim and Heliatek joined forces to create an architectural concrete panel façade system with the potential to double the power harvesting capacity of traditional roof-based solar technologies.
