

Photovoltaic panel installation has major danger sources

Overview

Which safety risks are associated with PV installations?

Through reviewing these articles, four major safety risk categories were identified as being associated with PV installations: (1) electrical and fire risks, (2) heat stress, (3) manual handling risks, and (4) fall risks.

Are there occupational safety risks associated with solar PV installation?

An obstacle to solar PV growth is the severity of the occupational safety risks associated with their installation. Although PV installers are known to experience some of the most significant and widespread construction-related occupational safety risks, PV installer accident investigation research, reporting, and verification are limited.

Are electrical and fire risks associated with PV installations?

The occurrence of electrical and fire risks can vary based on the type (e.g., rooftop, ground-mount), setting (e.g., residential, commercial, utility-scale), and weather conditions during PV installations.

How to minimise fire risk from solar PV systems?

The solar industry welcomes clarity on how to minimise fire risk from solar PV systems, which in absolute terms is extremely low. “The core way to mitigate any risk is to ensure the highest possible quality in the design, installation, operation, and maintenance of solar systems.

Are solar panels a fire risk?

Similarly, product defects make up a significant portion of solar-related fires, in which poor quality or incompatible components add to the risk of fire. Planning and design issues can also add to the risk of solar panel fires, causing damage to not just the PV installation, but the building on which they are mounted.

How dangerous is a photovoltaic installation?

Safety risks and mitigation measures Falls from elevated surfaces are the most significant contributing occupational hazard to fatalities in the construction industry (Dong et al., 2019, U.S. Department of Labor, 1990). Photovoltaic installations performed on elevated working surfaces expose installers to the risk of falling from dangerous heights.
