

# **Photovoltaic panel installation non-slip pants**

## Overview

---

What is a solar PV installation?

The confusion comes in as a solar PV installation is often much more than electrical work, for example some installations involve major roofing work and other structural changes especially when integrating photovoltaics into a building's fabric. This work goes beyond Part P and electrical installations, we are now talking about building work.

Are solar PV installations notifiable?

To clarify, what is certain is that nearly all domestic electrical work is notifiable under Part P of the Building Regulations (see below) and a solar PV installation is nearly always notifiable electrical work.

How do I install a solar photovoltaic system?

The most efficient way to install a solar photovoltaic system is by using a Heliomotion. Simply because a Heliomotion has innovative sun-tracking technology that enables solar panels to track the sun throughout the day and year. The possibilities for mounting solar are endless.

Who should install solar photovoltaic systems?

Installing solar photovoltaic systems require specialized skills and knowledge. Installation should be performed only by qualified persons. Installers should assume the risk of all injuries that might occur during installation, such as electric shock.

What is a solar panel installation?

An installation where the solar panel is mounted above the roof covering and the installation kit does not replace or significantly alter the roof covering beneath it. A type of electrical flashing or discharge that results from a connection through air to ground or to another voltage phase in an electrical system.

What are the risks of installing a solar PV system?

The installer is also faced with the dangers of handling potentially large and heavy equipment at height as well as ensuring that the installation of a solar PV system does not have a negative impact on the strength and integrity of the buildings structure (often a roof) where the system is to be mounted.
