

Photovoltaic panel installation supervision and inspection content

Overview

Do solar PV systems need a professional inspection?

Ensure provisions are made for a competent person to carry these out, as necessary. As with other installed technology and appliances (for example, domestic and commercial boilers), all solar PV systems need professional inspection and maintenance to identify and resolve technical and other problems.

What is a roof mounted photovoltaic system guidance?

The guidance refers only to the mechanical installation of roof mounted integrated and stand-off photovoltaic systems; it provides best practice guidance on installation requirements and does not constitute fixing instructions.

What is a solar facility inspection?

Visual inspection of Solar Facility's general site conditions, PV arrays, electrical equipment, mounting structure, fence, shading, trackers, vegetation, animal damage, erosion, corrosion, and discolored panels. Visual inspection and correction of Solar Facility for loose electrical connections and ground connections.

Are all PV products covered by IEC61730 'photovoltaic (PV) module safety qualification'?

In future it is expected that all PV products will increasingly be covered by International standard IEC61730: 2004 'Photovoltaic (PV) module safety qualification'.

Are there any UK standards relating to a PV installation?

While many UK standards apply in general terms, at the time of writing there is still relatively little which specifically relates to a PV installation. However, there are two documents which specifically relate to the installation of these systems that are of particular relevance:.

How can a solar PV system be monitored?

solar PV system, such as the electricity generated, temperature of key components. This can help identify faults and optimise system performance, by providing an indication of when a system needs investigation by trained and authorised engineers. Monitoring can be performed based on information received at diff
