

Photovoltaic panel land leasing standards

Overview

Do you need a lease for PV panels on a residential property?

This guidance provides information for photovoltaic (PV) panel providers and the public about lenders' minimum requirements with respect to consenting to a lease of roof space for the installation of PV panels ('the panels') on the roof of a residential property.

What happens during a solar panel lease term?

During the lease term, landowners will be unable to use the land (or any adjoining land) for other opportunities that would obstruct or affect the operability and efficiency of the solar project. For obvious reasons, solar panel leases will grant the tenant a right of free, uninterrupted and unobstructed passage of light to the solar panels.

What should a solar lease include?

The lease is also likely to contain covenants (which will bind the solar panel land and any adjoining land in the ownership of the landlord) not to do anything which could damage any electric cables or wires and not to deal with the land in any way that could be detrimental to the solar project.

Can I lease a roof space for PV panels?

Anyone considering agreeing to a lease of their roof space for fitting PV panels should be aware that most lenders' mortgage conditions will require the lender's consent to be obtained to any lease.

Should a tenant be required to leave solar panels on the land?

If the landowner validly forfeits the lease due to a breach of covenant or non-payment of rent, consider whether the tenant should be required to leave the solar panels on the land until all monies due to the landlord have been paid. Solar panels are a valuable asset and could be used to offset any debt owed to the landlord.

Can you lease a solar farm?

Using a portion of your land to lease for a solar farm opens up a diversified and dependable income stream. Responsibly designed solar can be a partner that supports the success of the UK's rural communities for generations to come.
