What is solar panel mounting?

Solar Panel mounting refers to methods of which solar panels are secured into place. Whether you are looking for a solution for a pitched roof, flat roof or field there is a unique mounting system at hand. Different kinds of solar panel mounting allow for design flexibility, varied aesthetics, and greater solar generation.

What is a vertical solar mounting system?

THE VERTICAL VARIANT. Schletter's vertical solar mounting system allows you to seamlessly integrate your solar panels with your building's façade, enabling you to harness solar energy efficiently and sustainably.

What are the different types of solar panel mounting?

By far the most common kind of solar panel mounting is an on-roof system. As the name suggests, the solar panels fix directly to the roof. On-roof solar panels, are a cost-effective solution. Providing excellent ventilation to your panels and optimal performance.

Can a photovoltaic plant be mounted to a façade?

RELEVANT REGULATIONS FOR MOUNTING PV TO FAÇADES. When mounting photovoltaic plants to building façades, specific regulations must be observed as defined by the glass manufacturers.

How do solar panels mount on a metal roof?

All in all, the panel mounting process for such a roof is very similar to that of an on-roof system. However, the rails are instead secured to the ridges of the metal roof by self-tapping screws. This keeps the Solar PV Panels very close to the roof, minimising any impact wind may have.

Can solar panels be installed on a trapezoidal metal roof?

Many commercial or outbuildings have metal trapezoidal roof structures. Lucky for these customers, installing Solar PV onto a trapezoidal metal roof is one of the cheapest and fastest means of deploying solar panels. All in all, the panel mounting process for such a roof is very similar to that of an on-roof system.
