

# Photovoltaic panel orientation and tilt angle

## Overview

---

The best all-year-round angle for PV (photovoltaic) solar panels in the UK is 35-40 degrees. The best angle for each region within the UK will vary slightly within this. For seasonal changes, the best angle for summertime is 20 degrees and 50 degrees in winter. See below for the optimum angle for each UK region.

If you have a solar system that can move with the seasons, whether manually or automatically, you will need to calculate the tilt according to the.

For winter work out your solar panel tilt by adding 15 to your latitude. So, if your latitude is 34.  $34 + 15 = 49$ . Your solar panels need a 49-degree tilt. If you're still learning about solar, refer to our complete advice section for more.

Having a completely flat solar panel array will still get a good amount of sunlight to generate energy. However, it is worth considering the fact that.

For summer you can do this by subtracting 15. For example,  $34 - 15 = 19$ . You would want a 19-degree tilt.

For maximum output, the sweet spot for solar panels in the continental U.S. is facing roughly south and tilted between 15 and 40 degrees, according to the Department of Energy. What is the optimal tilt angle of photovoltaic solar panels?

The optimal tilt angle of photovoltaic solar panels is that the surface of the solar panel faces the Sun perpendicularly. However, the angle of incidence of solar radiation varies during the day and during different times of the year.

Why does solar panel orientation and angle matter in a solar power system?

Prior to understanding why solar panel orientation and angle matter in a solar power system, we need to know how a solar panel collects energy from the sun. Solar panel cells only collect a specific wavelength during absorbing radiant energy from the sun.

What is a solar panel angle?

The solar panel angle, also known as inclination, refers to the vertical tilt angle between the surface of the solar panel and the ground. As the sun movement varies both geographically and seasonally, you need to adjust solar panel angles specific to the latitude, season, and time of day to maximize the power output.

How to adjust solar panel tilt angle?

But if your solar array is fixed, you may just work with the latitude as your fixed angle. If you would like to adjust your solar panel tilt angle monthly, you can reduce the latitude by  $5^\circ$  every month from the start of spring till June.

How to calculate solar panel orientation?

The orientation is composed of two parameters: direction and tilt angle. Select your timezone and enter your coordinates (latitude and longitude) to calculate the optimal orientation for fixed solar panels, twice adjusted solar panels, quarterly (seasonally) adjusted solar panels, and monthly adjusted solar panels.

Which factor determines the tilt angle of solar panels?

The second factor, the tilt angle, is decided by the elevation angle of the sun, i.e., at what altitude the sun is. If the sun is high in altitude, then the tilt angle would be small and solar panels would be more horizontal. For low altitudes, the tilt angle is large, and solar panels are vertical.
