

Photovoltaic panels installed but power cuts

Overview

Can a solar panel system continue to operate during a power cut?

The great news is that with the right setup from your solar PV experts, your system can continue to operate during a power cut. Many solar panel systems will automatically switch off when a power outage occurs, but you can avoid this by having a relay fitted.

Do solar panels work during a power cut in the UK?

Solar panels do not work during a power cut in the UK unless you have a battery storage system installed. If you are considering installing solar panels, it's essential to understand the limitations of the technology and the benefits of having a battery storage system installed.

Can solar panels fill up a battery in a power cut?

Yes, your solar panels can still fill up your solar battery in a power cut – but only with the right configuration. Your installer should use a battery inverter that can handle more power than the solar inverter, to avoid overloading the battery storage.

Do solar panels generate electricity during a power cut?

In some cases, solar panels may continue to generate a small amount of electricity during a power cut. However, this is only possible if the solar panel system is equipped with a battery storage system that can store the excess electricity generated by the panels. The stored energy can then be used to power essential appliances during a power cut.

Do solar inverters turn off when a power cut?

For this reason, solar inverters are designed to switch off when they detect a power cut. How long can solar panels power your home in a power cut?

With a battery, solar panels can run your household's electricity for hours or

even days during a power cut.

Should you buy a solar panel if you have a power cut?

On the flip side, if power cuts rarely happen to you and you're happy with your solar panel system as it is, it's not always a necessary purchase. After all, the great majority of UK homes don't go through any power cuts over the course of a year.
