## Overview

---

A solar array is a collection of multiple solar panels that generate electricity. A solar array facing south will have maximum output (though east or west-facing systems also provide ample energy). Are integrated solar panels better than traditional solar panels?

While integrated solar panels share multiple similarities with traditional solar panels, one key difference is their lower efficiency rate. Normal, roof-mounted solar panels are typically 16-22% efficient, whereas integrated solar panels have efficiency rates of 6-17%.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

Are in-roof solar panels better than traditional solar panels?

In-roof solar panels are aesthetically pleasing and seamlessly blend with the roofline. However, their efficiency is usually 5-10% lower than regular solar panels. Do traditional solar panels look bulky and less attractive?

Then, consider installing integrated solar panels instead.

Should you install solar panels for flats & apartments in the UK?

Installing solar panels for flats and apartments in the UK can be a beneficial practice, especially if you are looking to cut down on your electricity bills. This is because solar panels have gotten more efficient and cheaper in the past few years allowing for many more types of homes to install them with ease.

How do I choose the best solar panel location?

Consider optimal solar panel placement: To maximise solar panel efficiency, you will need to consider angle and orientation. The best position for a solar panel installation is on a south-facing section of your roof at a 30°-40° angle.

What are integrated solar panels?

Integrated solar panels – also referred to as in-roof panels – are essentially the same as traditional solar panels, but are embedded into a tileless section of roof.
