## Overview

---

✓ Solar panels work in all seasons, they just need direct or indirect sunlight ✓  
Solar panel output reduces by an average of 83% in winter compared to summer  
Can solar panels generate electricity in the winter?

The short answer is yes! Solar panels can still generate electricity in the winter. However, data shows that energy generation can drop to an eighth of what it would be on a summer day, so choosing solar panels designed to optimise energy production all year round is essential.

Does cold weather affect solar panels?

Cold weather doesn't affect solar panel performance (unless temperatures go below  $-40^{\circ}\text{C}$ ), since they operate on sunlight, which is still available in winter in the UK – albeit, at much lower levels than in the summer. This is one reason why solar panels generate less electricity in winter – the days are just shorter.

Can solar panels generate electricity during the frosty season?

We know that the solar industry is full of misinformation, but we only use reliable sources, including: As solar panels need daylight rather than heat, they can still generate electricity during the frosty season – although they might not be as effective because of a combination of factors associated with winter (explained below).

What happens to solar panels in winter?

Your solar panel output will typically be lower in winter. During these months, the days are shorter and the sun stays lower in the sky – meaning your panels will receive less daylight and less direct sunshine. However, your solar & battery system will benefit from the colder weather.

Can solar panels heat a house in winter?

In winter, solar panels can generate some of the electricity needed to heat a house, but you'll still need to buy some electricity from the grid. You can use

your solar panels to lower your heating bills if you have a system that runs on electricity, like a heat pump, electric boiler, or solar diverter.

Are solar panels a viable option in winter?

As solar panels need daylight rather than heat, they can still generate electricity during the frosty season – although they might not be as effective because of a combination of factors associated with winter: But even with these challenges, solar panels are still a viable option for sustainable energy all year round.
