

Photovoltaic solar panel water washing picture

Overview

What is solar panel wash (SPW)?

In recent years, companies have come up with innovative solutions that go beyond conventional waterless cleaning systems. In 2018, the American Polywater Corporation released a product known as Solar Panel Wash (SPW), which is a cleaning solution that forms a thin continuous layer of water on the solar panels.

What is solar panel cleaning?

First and foremost, let us introduce the two different terms discussed in this article: Solar panel cleaning: this entails washing the panels like windows. The cleaning may be combined with preventive maintenance of the solar collectors.

Can a waterless cleaning method remove dust from solar panels?

Dust that accumulates on solar panels is a major problem, but washing the panels uses huge amounts of water. MIT engineers have now developed a waterless cleaning method to remove dust on solar installations in water-limited regions, improving overall efficiency. Image courtesy of the researchers.

How much water does a solar panel use?

The SPW solution uses just 230 ml of water for each panel. In comparison, in the conventional wet cleaning and active brush cleaning methods, at least 2 litres of water would be used for each solar panel.

How to clean solar panels?

Step 2: Choose the best approach: If your solar panels are on the roof, consider using a telescopic window cleaning pole to clean them from the ground instead of using a ladder. Step 3: Mix your cleaning solution: In a bucket of warm water, mix a small amount of mild detergent or use a

specialised pre-mixed solution.

Can a solar panel take water from a pressure washer?

Solar panels are not designed to take the impact of a high pressure stream of water from a pressure washer. Furthermore, a grid-connected solar panel array with solar batteries is a high voltage electrical system which is potentially dangerous if it is damaged. Doing this will therefore almost certainly invalidate the warranty.
