Overview

What is the best foundation support for ground mounted PV arrays?

Drilled concrete piers and driven steel piles have been, and remain the most typical foundation supports for ground mounted PV arrays. However, there has been a push for "out-of-the-box" foundation design options including shallow grade beams, ballast blocks, helical anchors, and ground screws.

How is a ground mounted PV solar panel Foundation designed?

This case study focuses on the design of a ground mounted PV solar panel foundation using the engineering software program spMats. The selected solar panel is known as Top-of-Pole Mount (TPM), where it is designed to install quickly and provide a secure mounting structure for PV modules on a single pole.

How do you anchor a ground mounted solar array?

By Brandon Wronski, Special To Solar Power World Various options exist for anchoring ground mounted solar arrays. These include drilled shaft piles (also called micropiles or caissons), driven piles and helical piers or ground screws.

Are driven piles suitable for ground mount solar panels?

The design for uplift behavior of shallow footings has been discussed extensively by Kulhawy (1985) and Trautmann & Kulhawy (1988). Driven piles are an attractive foundation alternative for ground mount solar panel systems since the materials are readily available and Contractors are familiar with the technology.

What is a drive pile for a ground mount solar system?

Driven piles to support ground mount solar systems are typically lighter duty than those used for other structural applications with pipes typically in diameters ranging from 4 to 8 in. in diameter and H-piles typically made from W sections with flanges between 6 and 10 in.

Are helical piles a good choice for solar array anchoring?

Depending on ground conditions, helical piles can often be shorter in length and therefore cost less in installation time and energy consumption than comparable driven piles or drilled shafts. Some manufactures of helical piles for solar array anchoring assert installation rates as high as 500 piles per day.
