

# Photovoltaic support roof installation

## Overview

---

Can a solar PV system be installed on a flat roof?

Solar photovoltaic (PV) for flat roofs to generate renewable energy. Our solar PV systems are designed to ensure the Bauder waterproofing beneath remains completely intact and without compromise. The entire installation process of both of our photovoltaic systems is quick and simple.

Can a photovoltaic system replace roof cladding?

It is possible for photovoltaic systems to replace roof cladding entirely. This is known as a solar or energy roof. Additionally, PV modules can be integrated into the roof cladding. Solar roof tiles are a special type of in-roof installation. They can be integrated into the existing roof cladding without any extra mounting systems.

How do you mount a solar panel to a roof?

There are three main ways to mount the solar framework to the roof; 1. Ballasted (weighted) Installation In a ballasted installation, the PV array is not fixed to the roof but is held in place by weights, often concrete blocks.

How do I install roof-integrated solar panel roof tiles?

Roof-integrated solar panel installation is a simple process with Marley SolarTile® - just secure the fixings, place the first tile, push-fit additional tiles and then attach final fixings and flashings.

Can solar panels be installed on a roof?

They can be installed from between 12 to 50 degrees pitch and either landscape or portrait. On a new build the roof can avoid tiling the area where the solar will go. A waterproof tray sits in the tile free area to provide waterproofing and the solar modules are then mounted on top of this. See case study of an in-roof system here.

## How do in-roof solar panels work?

In-roof solar panel mounting systems provide a very aesthetic means of installing panels, by recessing the panels such that they lie flush with the existing roof surface. They can be installed from between 12 to 50 degrees pitch and either landscape or portrait. On a new build the roof can avoid tiling the area where the solar will go.
