

Planets in the sky today

Overview

Where can I find a detailed view of a planet?

See the indispensable Observer's Handbook, from the Royal Astronomical Society of Canada. Visit Stellarium-Web.org for precise views from your location. Almanac: Bright visible planets (rise and set times for your location). Visit TheSkyLive for precise views from your location.

Are all planets shown in the correct zodiac sign?

Only when the orbit realism slider is in the real position (against the tick icon) are all the planets definitely shown in the correct sign of the zodiac. For info on the desktop version controls, click [here](#). This page by default shows the diagrammatic view.

Can you see Neptune at night?

Use binoculars. Neptune is visible during most of the night, but it is best viewed in the late evening hours after sunset. Very faint, use binoculars. Need some help?

Sky map showing night sky tonight in Hong Kong, Hong Kong.

Is a planet in the zodiac sign Cancer?

Sometimes people look into the night sky and expect that a planet shown to be in the zodiac sign of say "Cancer" will be sitting over the star constellation Cancer. This is not always true since zodiac signs and constellations do not match up one to one.

Which planets enchant a stargazer?

Jupiter presents a captivating view with its prominent cloud bands, the iconic Great Red Spot, and up to four of its largest moons: Io, Europa, Ganymede, and Callisto. Saturn, the "Ringed Giant", enchants stargazers with its stunning ring system and gas giant beauty in the night sky.
