## Overview

---

Which power strip is best?

If you prefer a power strip with robust surge protection and a cord, Tripp Lite's Protect It 3-Outlet Travel-Size Surge Protector is the best choice. It's the only portable model we tested that clamps down on harmful power surges as effectively as full-size surge protectors.

What is a power strip & a surge protector?

Power strips allow you to plug more than one device into a single wall outlet. Surge protectors — which often double up as power strips — actually prevent surges in voltage from damaging the devices plugged into them. And surge protectors actually lose that ability over time, and need to be replaced.

Do you need a power strip or surge protector?

To prevent blowing a fuse or frying your devices, it's essential to plug everything into a power strip or surge protector. Power strips create extra outlet space for your electronics, from USB to regular AC. Surge protectors increase the number of outlets while also defending against spikes in voltage caused by power outages or grid fluctuations.

Should I buy a surge protector or battery backup from Best Buy?

Buy a surge protector or battery backup from Best Buy to ensure a safe and uninterrupted power supply to your devices.

Is Tripp Lite a good surge protector?

If you want robust surge protection on the go, or if you prefer a power strip with a cord instead of one that sits flush against a wall outlet, the Tripp Lite Protect It 3-Outlet Travel-Size Surge Protector is the model to get. Its surge protection is far better than that of most units of this size.

Do you need a portable power strip?

A portable power strip is great to have while you're traveling. Having additional outlets can be a (battery) lifesaver in airports and hotels, where wall outlets can be few and far between.
