

Power systems ac922

Overview

What is IBM POWER system AC922?

Send us your comments about this paper or other IBM Redbooks publications in one of the following ways: The IBM Power System AC922 is the next generation of the IBM POWER processor-based systems, which are designed for deep learning (DL) and artificial intelligence (AI), high-performance data analytics (HPDA), and high-performance computing (HPC).

What is a power AC922?

The world's only server enabling NVIDIA NVLink between CPUs and GPUs, the Power AC922 delivers 5.6x the data movement of x86-based servers. This I/O enables GPU-based algorithms to leverage system memory, enabling models up to 60x larger than x86 based systems.

What is IBM POWER system AC922 (8335-gth)?

The IBM Power System AC922 (8335-GTH) system is based on POWER9™ processor-based technology. Use this information to find the planning, installing, removing, replacing, configuring, and troubleshooting procedures.

Does power AC922 support Linux?

The Power AC922 server supports Linux, which provides a UNIX-like implementation across many computer architectures. Linux on Power Systems. The Linux OS is an open source, cross-platform OS. It is supported on every Power Systems server IBM sells.

What are the operating environment specifications for the power AC922 server?

Table 3-2 provide the operating environment specifications for the Power AC922 server model GTX with four or six GPUs installed with 32 Gb or 16 Gb GPUs. a. Derate maximum allowable dry-bulb temperature 1°C (1.8°F) per 175 m above 950 m. IBM recommends a temperature of 18°C - 27°C (64°F -

80.6°F).

Can a power AC922 processor be mixed?

Processor features must be in quantities of two and cannot be mixed. The Power AC922 server is a two-socket system that supports two POWER9 SCM processor modules. The server supports a maximum of 16 DDR4 RDIMMs slots in the main system board directly connected to the POWER9 processor. Memory features equate to a single memory DIMM.

Power systems ac922

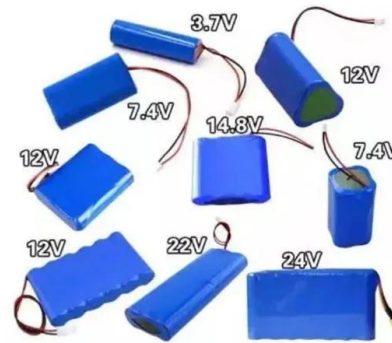

IBM Power System AC922 Introduction and Technical Overview

The Power AC922 server is the next generation of the IBM Power processor-based systems, which are designed for deep learning and artificial intelligence (AI), high-performance analytics, and high-performance computing (HPC).

[IBM Power Advanced Compute \(AC\) AC922 Server](#)

IBM launches first Power9 server, AC922 Power Systems

IBM has revealed the first device to use its new Power9 processor, the AC922 Power Systems server, designed for compute-heavy artificial intelligence workloads. IBM claims that, as the first system to embed PCIe 4.0, Nvidia NVLink and OpenCAPI, the AC922 enables data to move 9.5 times faster than on PCIe 3.0 based x86

systems.
