What are the current control strategies for single phase grid integrated photovoltaic inverters?

This paper has reviewed the current control strategies for single phase grid integrated photovoltaic inverters. From the above study, it can be concluded that the MPCC scheme shows best steady state performance as compared to other schemes. It also achieves effective harmonic mitigation in terms of reduced THD value of output current.

What is a current controller in a photovoltaic inverter?

A current controller is employed to mitigate the harmonics in the current injected into the grid and regulate the power exchange between the plant and the grid. This paper presents a review of the current control strategies implemented for a single phase grid tied photovoltaic inverter.

Which controller is used in PV inverter?

Another controller used is low-pass filter in the feedback path along with harmonic compensator to improve the grid current quality [ 7 ]. Proportional resonant (PR) controller is an algorithm used in the current controller which is used to integrate the PV inverter into the grid.

Can a PI controller be used for PV inverter current control?

Therefore, the PR controller can be successfully applied to single grid-connected PV inverter current control. On the contrary, a PI controller has steady-state errors and limited disturbance rejection capability.

Which current controller is best for grid-connected PV inverters?

A commonly used current controller for Grid-Connected PV Inverters is the PR current controller. This controller is highly suited to operate with sinusoidal references like the reference used in Grid-Connected PV Inverters, thus making it an optimal solution for this application.

Can a grid-connected PV inverter inject sinusoidal current to the grid?

The paper investigates and analyzes a controller model for grid-connected PV inverters to inject sinusoidal current to the grid with minimum distortion. To achieve better tracking and disturbance rejection, a DSP-based current controller is designed with LCL filter.
