Quick Takeaways: Solar panel inverter costs can range from £500 to £2,500. String inverters are cheaper than microinverters, but the latter offers more advantages and a longer lifespan. Other factors that can impact the solar panel inverter cost include your system size, inverter efficiency, and whether it's grid-tied or off-grid. What are the different types of solar inverters?

Let's explore the most popular types: hybrid solar inverters, string solar inverters, and micro solar inverters. String solar inverters are the most common type of inverters used in solar power systems. They connect multiple solar panels in a series (string) and convert the combined DC electricity into AC electricity.

How much does a solar inverter cost?

Meanwhile, microinverters typically cost around £100-150 per unit. Power optimisers typically cost £40 each, but need an inverter costing around £600 as well. So if you had a 3.5 kW solar PV system comprised of 10 350W panels, you'd need to spend either £1,000-1,500 for 10 microinverters, or £1,000 for £400 worth of optimisers and a £600 inverter.

What is a solar inverter?

A solar inverter is a vital segment of a solar power system that converts the direct current (DC) electricity produced by solar panels into alternating current (AC) electricity, which is suitable for powering your home appliances and feeding back excess electricity into the grid.

What size solar inverter do I Need?

You'll generally need an inverter that's 75% as big as your solar panel system's kilowatt-peak (kWp), which is how much solar energy it produces at standard test conditions. Every inverter has a startup voltage – that is, the amount of power needed for it to turn on and start converting DC electricity from your solar panels.

What is a hybrid solar inverter?

Hybrid solar inverters are versatile and efficient inverters that offer a combination of features. They convert DC electricity from solar panels into AC electricity for immediate use and allow you to store excess energy in solar batteries for later use. This means you can harness solar power even when the sun is not shining.

Do solar panel inverters generate more electricity?

If your inverter is as big as your system or larger, your panels will need to generate more electricity to switch on your inverter – and some days, that may not happen. Solar panel inverters play a crucial role in any solar panel system, ensuring that the energy harvested from the sun is usable within your home.
