5 Major Types of Renewable Energy

Non-renewable fossil fuels (coal, crude oil, and fracked gas) supply people with about 80% of all energy consumed globally and in the United States. Their burning releases carbon dioxide, a major greenhouse gas that's accelerating climate change. Nuclear energy is a second type of non-renewable energy that makes up only 2% of global energy, but 8% in the U.S.

Renewable energy

Renewable energy means using power from things in nature that never run out, like sunlight, wind, water, and heat from the Earth. Unlike fossil fuels, which are finite close finite Something that
