

# Questions on solar energy

## Overview

---

What questions do you ask about solar energy?

Here are some of the most frequently asked questions about solar energy we receive. What is the difference between grid-tied and off-grid solar?

What are the components that make up a solar energy system?

How long will my system last?

We've written the answers with newcomers in mind, so you don't need any prior solar background to follow along.

Should I go solar?

You will likely be able to benefit from solar energy, whether by installing solar panels on your property or tapping into a community solar project. We'll cover why going solar is a great choice, how to go solar and pay for it, and how EnergySage can help you make informed decisions about your solar energy investment.

How many questions do you get a day from a solar supplier?

As a solar equipment supplier that sells direct to the public, we receive over 200 calls a day from people at every experience level, from seasoned solar installers to homeowners exploring the possibility of going solar. Many of these calls involve frequently asked questions.

What is solar energy?

Solar energy is that produced by the Sun's light photovoltaic energy and its warmth solar thermal for the generation of electricity or the production of heat. Inexhaustible and renewable, since it comes from the Sun, solar energy is harnessed using panels and mirrors.

Are solar panels eco-friendly?

To achieve this, solar panels use solar radiation from the sun to generate heat, which is then converted into electricity. This makes solar energy one of the most eco-friendly energy sources available, as it has virtually no effect on the environment and is capable of providing clean energy for homes and businesses.

Should you buy more solar panels?

You will need to purchase more panels to produce more energy. Not only has a renewable and clean source of energy rather worked cheaper than fossil fuel resources. Solar energy can be converted into solar power through many technologies, thus making this abundantly available source of energy viable for the next 1000crore years.
