

# **Reactive Power Compensation for Microgrids**

## Overview

---

What compensation methods are used in microgrids?

UPFC for combined conventional and DG grid compensation , UPQC for power quality improvement , , Kalman filter in WECS for VAR control, Battery storage along with micro-wind energy generation system ( $\mu$  WEGS) for voltage support were presented for various compensation methods in microgrids.

Which model is used to optimize microgrids?

Model 1: Only active optimization is considered, coordinating the microgrids to affect the power flow. Model 2: Uses coordinated active and reactive power optimization, coordinating microgrids and reactive devices to affect power flow. Model 3: Based on Model 2, the reactive power support of microgrid to distribution network is further considered.

Does a microgrid reduce network loss?

The reactive power provided by the microgrid will further reduce the network loss of the distribution network. Based on the original draft, the reactive power support of the microgrid is added in this paper, and the network loss is further reduced by 13.76% compared with that without considering the reactive power support of the microgrid.

How can the reactive output of a microgrid be adjusted?

The reactive output of the microgrid can be adjusted according to the reactive load to achieve local reactive power balance and provide certain reactive support for the upper distribution network (Fig. 28).

How can Smart Grid technology help a microgrid?

They can inject or absorb reactive power, ensuring voltage stability and compensating for imbalances within microgrids. Integrating smart grid technologies and communication systems enables the real-time supervision and regulation of reactive power assets.

What are power quality problems in a microgrid?

Power quality problems in a microgrid are of a large variety such as voltage harmonics, voltage sags, voltage swells, voltage unbalance, current harmonics, reactive power compensation (RPC), current unbalance and circulation of neutral currents, impulse transients, and interruptions .
