

Reasons for the sale of PV panels

Overview

Should you buy a solar PV system for your home?

Well-chosen solar panels can provide a reliable source of renewable electricity for decades, helping to slash your electricity bills and cut your carbon footprint. But buying an inappropriate solar PV system for your home could leave you out of pocket.

How does a solar PV system work?

A solar PV system usually comprises: solar panels. inverter – usually fitted in the loft, this converts the direct current (DC) produced by the solar panels into safer alternating current (AC) which can be used in your home. isolator switches – fitted before and after the inverter for safety.

Why do people buy solar panels?

Being more environmentally friendly and combatting the high cost of grid electricity were among the biggest reasons people bought solar panels, according to our recent survey. Others were keen to reduce their reliance on grid electricity, or were prompted by local council or government schemes.

Why do people install solar panels?

Solar panels are often marketed as a way to save money on electricity – and sometimes as a way to make money too. This is because you can get paid for the electricity they produce that you don't use. Of course, many people install solar panels for other reasons.

Should you buy solar panels in the UK?

Unpredictable energy prices and a focus on greener energy have seen more and more UK homeowners buy solar panels in recent years. Whether you're looking to lower your energy bills, minimise your carbon footprint, or reduce your reliance on the national grid, solar panels make a great choice.

Are solar panels a waste of money?

Too large a system may be a waste of money if you generate energy that you can't use, although installing a solar battery and/or exporting energy to the grid can help make the most of any excess. Solar panel system sizes are normally expressed in kilowatt peaks (kWp), which is the maximum output of the system.
