

Renew energy news

Overview

Will renewable power increase in 2021?

Despite rising costs for key materials used to make solar panels and wind turbines, additions of new renewable power capacity this year are forecast to rise to 290 gigawatts (GW) in 2021, surpassing the previous all-time high set last year, according to the latest edition of the IEA's annual Renewables Market Report.

Will India reach 500 GW of renewable power by 2030?

"The growth of renewables in India is outstanding, supporting the government's newly announced goal of reaching 500 GW of renewable power capacity by 2030 and highlighting India's broader potential to accelerate its clean energy transition," said Dr Birol.

Will renewables grow in 2026?

The growth of renewables is forecast to increase in all regions compared with the 2015-2020 period. China remains the global leader in the volume of capacity additions: it is expected to reach 1200 GW of total wind and solar capacity in 2026 - four years earlier than its current target of 2030.

Will renewables increase global power capacity in 2026?

Renewables are set to account for almost 95% of the increase in global power capacity through 2026, with solar PV alone providing more than half. The amount of renewable capacity added over the period of 2021 to 2026 is expected to be 50% higher than from 2015 to 2020.

Will global renewable capacity increase by a half times by 2030?

"The new IEA report shows that under current policies and market conditions, global renewable capacity is already on course to increase by two-and-a-half times by 2030.

How big is renewable power capacity in 2023-28?

The report shows that under existing policies and market conditions, global renewable power capacity is now expected to grow to 7 300 GW over the 2023-28 period covered by the forecast. Solar PV and wind account for 95% of the expansion, with renewables overtaking coal to become the largest source of global electricity generation by early 2025.
