Wind Energy

Wind energy is a form of renewable energy, typically powered by the movement of wind across enormous fan-shaped structures called wind turbines. Once built, these turbines create no climate-warming greenhouse gas emissions, making this a "carbon-free" energy source that can provide electricity without making climate change worse.

What is renewable and non-renewable energy?

Renewable energy includes solar, hydro and wind energy. When the wind moves the blades on a wind turbine this movement can be converted into electrical energy that we can use. The wind is not used

What is renewable energy?

Tapping into sources of renewable energy is a relatively new development in the history of human energy production. Early human ancestors used wood to generate heat energy, then switched to coal

Renewable and Non-renewable Energy Resources

by Kevin Stark There are two major categories of energy: renewable and non-renewable. Non-renewable energy resources are available in limited supplies, usually because they take a long time to replenish. The advantage of these non-renewable resources is that power plants that use them are able to produce more power on demand. The non-renewable energy ...
