

Renting solar panels to others

ESS

Overview

Leasing typically follows these guidelines: The company that provides your lease is responsible for solar panel installation and will provide ongoing system maintenance. In exchange, you sign a contract agreeing to lease the solar panels for a specified period, typically 15 to 25 years, and pay a monthly fee during that time. Should you lease solar panels?

There are five main advantages to leasing solar panels: Save money on electricity: the system will reduce how much energy you use from the grid when switched on. Low or no upfront costs: you don't have to buy the panels and other equipment upfront.

Can a rent-a-roof company install solar panels?

Where an installation is owned by a rent-a-roof company, we would expect there to be a signed 'agreement' between the relevant parties, i.e. the homeowner and the rent-a-roof company, such as a lease agreement, with the homeowner agreeing to rent their roof to the company for the purposes of installing solar PV panels.

Are solar panels paying rent for your roof?

Technically, they're not paying rent for your roof, because you'll get the benefit of powering your home using solar power instead of grid electricity. They'll make money from the electricity you don't use. All excess electricity generated is sold back to the grid via the Smart Export Guarantee (SEG) scheme.

What is a solar panel rent-a-roof scheme?

The Rent-a-Roof scheme lets people who can't otherwise afford solar panels gain access to them, through installers who will setup solar panels on roofs for reduced prices. Installers can then sell any excess electricity generated back to the grid.

Can you still rent a room if you can't afford solar?

Costs for solar power have plummeted since then. You can now get a 3.5 kW system for £7,026. Because of this, many installers have stopped offering the Rent-a-Roof scheme as it's no longer as lucrative to sell electricity back to the grid. Some installers do still offer Rent-a-Roof for people who can't afford solar panels.

Can a third party install solar panels on a property?

The most common arrangement is that the third party installs solar PV panels on the property. The homeowner then receives the electricity generated (lowering their electricity bills) and the third party owner of the installation receives any associated subsidies, in this instance, FIT generation and export payments.
