## Overview

---

What is a photovoltaic (PV) module?

Photovoltaic (PV) module integrated with advanced inverter technologies has the ability to indirectly tune the reactive power from the grid with strict precision which is impossible to achieve with conventional passive compensators.

How does a PV inverter state machine work?

The inverter state machine then sequences to checking for DC voltage. To feed current into the grid the DC voltage (which in case of PV inverters is provided from the panel or panel plus some conditioning circuit), it must be greater than the peak of the AC voltage connected at the output of the inverter.

What is a photovoltaic (PV) panel?

The solar panel or PhotoVoltaic (PV) panel, as it is more commonly called, is a DC source with a non-linear V vs I characteristics. A variety of power topologies are used to condition power from the PV source so that it can be used in variety of applications such as to feed power into the grid (PV inverter) and charge batteries.

How does a grid tied PV inverter work?

A typical PV grid tied inverter uses a boost stage to boost the voltage from the PV panel such that the inverter can feed current into the grid. The DC bus of the inverter needs to be higher than the maximum grid voltage. Figure 20 illustrates a typical grid tied PV inverter using the macros present on the solar explorer kit. Figure 20.

How many solar panels can a solar inverter power?

The nominal input voltage is 36 V DC. Therefore, one solar panel with an output voltage of 36 V, or two solar panels each of 18 V connected in series

can be used as the power source for the inverter. For demonstration purposes, the nominal output power of the solar panels can vary from about 50 W up to 200 W per panel.

Can a solar inverter work with a DC power supply?

The inverter can work with the standard DC power supply used as the power source, instead of the solar panel. The power supply has to meet the specification of the 30 V DC output voltage and a 4 A max output current. When the DC power supply is used, the MPPT feature does not function.
