

# Section 23 4 minor members of the solar system

## Overview

---

These minor 'planets' are now divided into two classes: dwarf planets, and Small Solar System Bodies (SSSBs). Between the orbits of Mars and Jupiter lies what is termed the Main Belt of what are still universally called asteroids, the largest of which, Ceres, has been elevated to dwarf planet status.

Members of the Solar System. Chapter 23,  
Section 4. Asteroids. Asteroid - small rocky  
bodies that have been likened to "flying  
mountains" Most asteroids lie between the orbits  
of ...

23.4 Minor Members of the Solar System

Asteroids In February 2001, an American  
spacecraft, NEAR Shoemaker, finished it's  
mission in space by becoming the first craft o  
land on an asteroid. This historic accomplishment  
was not part of Shoemaker's original goal, which  
was to orbit the asteroid, which was to orbit the  
asteroid and collect data. With it's original  
mission completed, NASA engineers made the  
decision to see if ...

### Astronomy 23.4 Minor Members of the Solar System Flashcards

Study with Quizlet and memorize flashcards containing terms like Where are most asteroids found?, What usually allows us to see a comet?, Where do meteoroids originate? and more.
