

# **Shanshan Energy Storage System**

## Overview

---

What is Shanshan lithium battery materials technology?

On June 27, Shanshan announced that its subsidiary Shanghai Shanshan Lithium Battery Materials Technology (Co. Ltd.) will build an integrated manufacturing base for the production of Si-based anode materials used in Li-ion batteries. The project will be located in Ningbo, a sub-provincial city in China's Zhejiang Province.

Is Shanshan a good company to buy Si-based anode materials?

Shanshan is one of the few companies in the world that have achieved mass production for Si-based anode materials. In addition to possessing a substantial production capacity, Shanshan has also completed the qualification of its Si-based anode materials. Shipments of related products to its key clients are currently taking place.

Who is Shanghai Shanshan?

Shanghai Shanshan is the main investment vehicle for this project. Established in December 2014 and headquartered in Shanghai's Free Trade Zone, the subsidiary focuses on the development, production, and sales of anode materials and other kinds of advanced carbon materials. Shanshan Group currently possesses an 87.08% stake in the subsidiary.

How much will Shanshan invest in a new integrated manufacturing base?

Shanshan plans to invest around RMB 5 billion in the project. Once the integrated manufacturing base is up and running, it is expected to output as much as 40,000 tons of anode materials per year. The development of the new integrated manufacturing base will be divided into two phases.

What is a chemical energy storage system?

Chemical energy storage systems (CESSs) Chemical energy is put in storage in the chemical connections between atoms and molecules. This energy is

released during chemical reactions and the old chemical bonds break and new ones are developed. And therefore the material's composition is changed . Some CESS types are discussed below. 2.5.1.

How much money will Shanshan invest in Ningbo & Zhejiang?

The project will be located in Ningbo, a sub-provincial city in China's Zhejiang Province. Shanshan plans to invest around RMB 5 billion in the project. Once the integrated manufacturing base is up and running, it is expected to output as much as 40,000 tons of anode materials per year.
