

# **Sign lights converted to solar power generation**

## Overview

---

There are so many types of signs. In this section, we will cover signs that require illumination in one way or another. This doesn't necessarily mean that each and every one of them will have lighting, but they are the most common signs to require a light system.

Having a sign installed is only the first step. After the installation, you should ensure the sign is properly illuminated. Illuminating a sign can.

Why would you want to use a solar lighting solution for your next sign?

This is a good question! Solar is suitable for applications where traditional energy isn't available or is very costly to bring to.

There are two types of solar units on the market today - one that is manufactured by a custom solution provider like us here at SEPCO and online or.

Only a few steps and pieces of information are required to size up a solar solution for a sign. Since signs are quite simple, unlike many other solar lighting applications, putting the system.
