Overview

What is solar power?

Solar power is the conversion of sunlight into electricity, either directly using photovoltaic (PV), or indirectly using concentrated solar power (CSP). The research has been underway since very beginning for the development of an affordable, in-exhaustive and clean solar energy technology for longer term benefits.

How can solar power a city?

When you collect large amounts of solar panels and place them in optimal locations, the potential for generating electricity increases immensely. This can then be used to power villages and towns, all the way up to entire cities depending on the scale of the solar farm. Take India's Bhadla Solar Park for example.

Can a hybrid solar power system replace a conventional energy source?

Hybrid solar power system Many experts believe that it is not possible for one single alternative renewable energy source to replace the conventional energy source (fossil fuels), but rather a combination of different types of clean energy source will be required instead. Such system is called hybrid system.

Can a solar PV system store electricity?

Solar PV systems cannot store the electricity they produce unless you also have a battery fitted to your home (which most don't). In order to use the electricity produced for free, you must use it at the time it is generated - it can't be saved for later in the evening.

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be

installed in grid-connected or off-grid (stand-alone) configurations.

How can solar energy be turned into electricity?

Thanks to constant improvement, turning solar energy into electricity has gotten more efficient, meeting our increasing energy needs. Solar panels are key in this process. Installed on rooftops, they capture sunlight for electricity. These panels have solar cells made from silicon wafers.
