Overview

Solar Roadways Incorporated is an American company based in , aiming to develop road panels to form a . Their technology is a hexagonal road panel that has a glass driving surface with underlying , electronics, and sensors to act as a part of solar array with programmable capability. The concept has been criticized as unfeasible and uneconomical as either a road surface or a photovoltaic system.

What is a solar roadway?

A solar roadway is any road with solar panel technology attached to its surface, thus producing electricity while supporting the cars and trucks that drive on it. While an exciting and innovative way to generate solar power, solar roadways are far from a realistic, cost-effective energy production method.

How do solar roads work?

This has now been accomplished. A solar roadway consists of individual solar road panels with three layers: a top layer of high-strength, textured glass that provides traction for vehicles, an array of solar cells beneath that for gathering energy, and a base plate that distributes the collected power, according to Solar Roadways.

Is a solar roadway suitable for heavy vehicles?

A solar roadway is not suitable for heavy vehicles since it cannot withstand very heavy loads. Solar roadways are employed to generate electricity by using solar photovoltaic cells thus contributing to sustainable development. This type of roadway was first built in France in 2016.

Who is solar roads?

Solar Roadways Incorporated is an American company based in Sandpoint, Idaho, aiming to develop solar-powered road panels to form a smart highway.

How many Solar Roadways are there in the US?

There's one solar roadway in the U.S. A solar roadway in Peachtree Corners, Georgia is apparently the only one currently operational in the U.S. It was installed in late 2020 using WattWay road panels.

How to build a solar roadway?

The construction process involves furnishing and wiring the base plate, placement and connection of solar photovoltaic cells with the previously placed layers, and finally, the positioning of the glass layer. A solar roadway is not suitable for heavy vehicles since it cannot withstand very heavy loads.
