

Solar cheapest form of energy

Overview

The cheapest renewable energy is indeed solar energy. The International Energy Agency's World Energy Outlook 2020 stated, "With sharp cost reductions over the past decade, solar PV is consistently cheaper than new coal- or gas-fired power plants in most countries, and solar projects now offer some of the lowest-cost electricity ever seen."

Yes! Solar power has recently become the cheapest energy source in history, as mentioned above. And of the wind, solar, and other renewable energy sources in use in 2020, 62% were cheaper than the cheapest new fossil fuel.

Solar is the cheapest form of energy due to the lower cost of building panels to harvest energy from the sun. Additionally, scientists and engineers are actively researching technology that will create high input for smaller panels, lower costs of fabrication for panels.

Here is a breakdown of the cost of renewable energy according to our research, ranked by least to most expensive: 1. Solar, standalone — \$32.78 per MWh 2. Geothermal — \$36.40 per MWh 3. Wind, onshore — \$36.93 per MWh 4. Combined cycle — \$37.11 per MWh 5. Solar, hybrid — \$47.67 per MWh 6.
