Solar energy efficiency in summer and winter

Overview

Believe it or not, but the cold weather can be beneficial when it comes to the production of energy given off by solar panels. Solar panels are essentially another electronic device, much like computers, radios, or household appliances. Just like any electronic device, they function more efficiently in cold weather.

Although cold weather will not have a negative impact on a solar panel's performance, other factors such as snowfall could influence.

It's no secret that the amount of daylight on a given day during the winter is a lot shorter than during the summertime. Although this does reduce the amount of time a solar panel is working at full efficiency, the amount of
