

Solar energy for retail

Overview

Can food retail use solar energy?

One of the fastest-growing and most promising commercial segments for solar energy applications is food retail. The logic is inescapable, with supermarkets consuming more electricity than almost any other retail sector.

Should retailers invest in solar panels?

While retailers that invest in solar panels have increased upfront costs, over time they will benefit from more predictable electricity costs and reduced business operation expenses, according to All Energy Solar, which estimates that most solar power systems pay for themselves within five to 10 years.

Could solar power a supermarket?

“If a solar installation is big enough, not only could it power the store, but the supermarket could ‘sell’ electricity back into the grid and receive credit towards future power needs, while also helping to improve the variety of local energy sources,” he wrote.

Should grocery stores install solar?

More retailers should take advantage of the large roofs they tend to have to try out solar installations, advises All Energy Solar, a company based in Saint Paul, Minn. In a recent blog post, the company noted that loans are available to help grocery stores and supermarkets install solar.

Which stores have solar panels?

Leading chains such as Kroger, Publix, Aldi, H-E-B, Giant Eagle, Stop & Shop, Giant Food, Whole Foods, Target and Walmart are among those that have added solar panels to stores and other facilities, and a few retailers have set impressively high standards around renewable energy.

Will renewables be a part of the power sector in 2021 and 2022?

It forecasts that renewables will again account for 90% of the power sector's expansion in 2021 and 2022. Let's see how some of our members have implemented solar energy into their business operations:
