

Solar energy international courses

Overview

What is solar energy international's online campus?

Solar Energy International's (SEI) Online Campus has been offering online courses in solar pv, renewable energy, and sustainable building technologies for over 10 years. Through our outreach programs, SEI works with grassroots and development organizations to promote sustainability and improve quality of life around the world.

What is Solar Energy International (SEI)?

Solar Energy International (SEI) is the largest alumni network and training program in the world dedicated to solar energy and renewable energy technologies. With over 85,000 students and alumni, Solar Energy International (SEI) has provided hands-on workshops and online courses in renewable energy and sustainable building technologies since 1991.

Why should you take an online solar training course?

In a recent Home Power Magazine article, it was found that SEI has more certified instructors and years of experience than any other solar training organization polled. So as you take an online course from SEI you can be assured you have a quality cadre of solar training and renewable energy instructors there to support you.

Where can I get solar training online?

Our instructors are here to help! Celebrating 25 years of Solar Training and Renewable Energy education, SEI has been providing online solar training and in-person workshops to students from around the world. The SEI Online Campus provides anywhere / anytime access to our world-class curriculum and highly trained instructors.

What makes solar energy international different?

Solar Energy International takes pride in our decades of developing Solar

Training and Renewable Energy curriculum, but what really sets SEI's training apart from any other organization is our people.

What will I learn in a solar hot water system course?

Students in this course will learn the theory, design considerations and installation strategies necessary to install and maintain a solar domestic hot water system. Passive solar water heaters, drainback systems, antifreeze systems, and photovoltaic powered systems are all addressed, as well as an introduction to pool and space heating systems.
