Overview

Do solar panels work in the winter?

Yes, solar panels work in the winter. In fact, solar panels can generate electricity in almost any type of weather. Cold weather doesn't affect solar panel performance (unless temperatures go below -40°C), since they operate on sunlight, which is still available in winter in the UK – albeit, at much lower levels than in the summer.

Does cold weather affect solar panels?

Cold weather doesn't affect solar panel performance (unless temperatures go below -40°C), since they operate on sunlight, which is still available in winter in the UK – albeit, at much lower levels than in the summer. This is one reason why solar panels generate less electricity in winter – the days are just shorter.

Why do solar panels generate less electricity in winter?

This is one reason why solar panels generate less electricity in winter – the days are just shorter. There also tend to be more cloudy days in winter, which can reduce the solar panels' output.

Do solar panels work in summer?

Each year as summer turns to winter, the days get shorter, and the sun is lower in the sky, you may expect solar panels to become pretty redundant. Thankfully, solar panels continue to work well on less sunshine, even if they don't produce quite as much electricity as they do on clear summer days.

Can solar panels heat a house in winter?

In winter, solar panels can generate some of the electricity needed to heat a house, but you'll still need to buy some electricity from the grid. You can use your solar panels to lower your heating bills if you have a system that runs on electricity, like a heat pump, electric boiler, or solar diverter.

Can solar panels work in winter in the UK?

Despite the days being shorter, solar panels can still work effectively during winter in the UK, especially on clear days. We've seen that cold weather can boost output, and though snow can be a bit of a hassle, you can still take full advantage of the winter sunshine with some well-positioned panels and proper care.
