

Solar panels power bank

Overview

Most portable solar chargers have smaller panels of around two watts or less, so the panel serves as a slow, emergency-charging system and the battery does the lion's share of the work. If you know you'll be away from an electric outlet for a while and need to rely more heavily on the solar aspect of the unit, you'll want to.

Consider how many devices you'll be toting along with you that will need a recharge, and how often you'll be away from an outlet for a fast.

Many chargers have convenient features like wireless charging, flashlights, and carry handles. If you plan on hiking, going kayaking or rafting, mountain biking, or other active adventures consider a charger that's also waterproof or shockproof.

Solar panels power bank
