## Overview

---

What is a good load value for a solar mounting system?

a load value no less than 1.0kN/m<sup>2</sup> (See Note (ii)) for a mounting system. Where testing an individual roof bracket/hook then the load value shall be no less than 0.25kN. the load being considered is the combined static weight/load of the solar mounting system, solar panels, and snow.

What should be included in a solar PV system diagram?

The diagram should have sufficient detail to clearly identify: Figure 10: 70-Amp Double Pole Breaker. Figure 11: Site/System Diagram. The diagram should include: array breaker for use by the location, size, orientation, conduit size and location and balance of system solar PV system. component locations.

Do I need to meter a photovoltaic system?

It is assumed that aluminum framed photovoltaic (PV) panels mounted on a “post” and rail mounting system, the most common in the industry today, will be installed by the homeowner. While metering the system is encouraged, the specification does not address system wiring elements for associated system sensors or monitoring equipment.

What is the difference between a solar panel and a roof mounting system?

Solar panel - this document uses the term solar panels as a collective term for solar thermal collectors and PV modules. Roof mounting system - a collection of parts or components designed to mount solar panels on the roof of a building.

What are photovoltaic panels & how do they work?

They are designed for builders constructing single family homes with pitched roofs, which offer adequate access to the attic after construction. It is assumed that aluminum framed photovoltaic (PV) panels mounted on a “post”

and rail mounting system, the most common in the industry today, will be installed by the homeowner.

Do solar panels need a maximum design wind uplift resistance?

7.4 Solar panels may be required to facilitate testing of mounting systems or individual components. A Maximum Design Wind Uplift Resistance shall be determined and declared when assessed in accordance with Appendix A1. The value is declared in Kilopascals (kPa) for mounting systems, or Kilonewtons (kN) for individual components.
