

Solar photovoltaic panels installed facing north

Overview

While it is not the standard recommendation, it is possible to install solar panels on a north-facing roof and still receive the financial and environmental benefits of solar energy. Can solar panels be installed on a north-facing roof?

With the growing demand for solar energy, many homeowners are beginning to ask the question of whether or not solar panels can be installed on a north-facing roof. While it is not the standard recommendation, it is possible to install solar panels on a north-facing roof and still receive the financial and environmental benefits of solar energy.

Are north-facing solar panels better than south-facing?

While most experts recommend south-facing solar panels for optimal performance, north-facing panels can still be viable. The challenges associated with north-facing roofs can be overcome with proper orientation and avoiding shade. All these benefits make the system expected to pay for itself in less than six years.

Are north facing solar panels worth the money?

With electricity prices rising, north facing solar panels are now often worth the money. Long ago, when the year was 2010, electricity was cheaper than it is now and solar panels were way more expensive. Installing solar just about made financial sense on a south facing roof. But installing on a north facing roof made absolutely no sense.

Should solar be installed on a south facing roof?

Installing solar just about made financial sense on a south facing roof. But installing on a north facing roof made absolutely no sense. That's because a north facing solar system typically produces about 56% of the output of a south facing system.

What is the difference between North and south facing solar panels?

There is an obvious difference between north and south facing solar panels in the UK, with south-facing solar panels between a 20 and 50 degree angle being the most preferable position. Again, this doesn't mean that solar panels in a northern orientation are obsolete, but they will not produce as much solar energy as those that face south.

Can solar panels be installed on a roof?

Although roof-mounted is the most common domestic method of solar panel installation, there are other alternatives if you have limited roof space, a structurally weak roof, or a roof that doesn't face south. Ground-mounted solar panels are fixed into the ground via a racking system and are usually positioned slightly above the ground.
